DEATHS/YEAR

>\$25B
READMISSIONS
PENALTIES/YEAR

MedSure Systems is the first patient med adherence solution of its kind.

MedSure combines smart technology and relational care to increase medication adherence and provide practices with an additional revenue stream.

MedSure App Interface

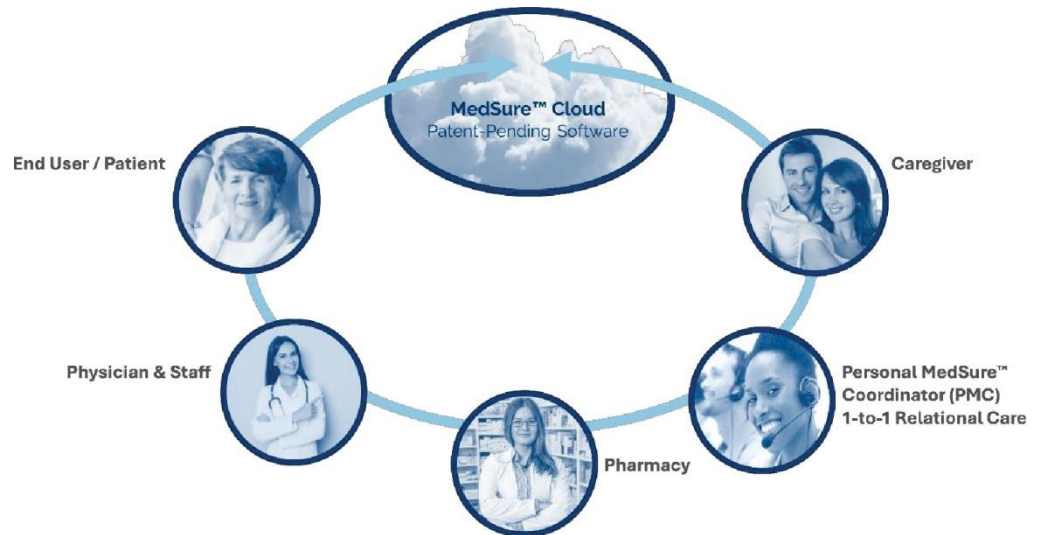

MedSure patients have achieved more than
90.0% medication adherence.

Benefits to the Practice

- ✓ Better Patient Outcomes
- ✓ Increased Productivity & Reduced Unbillable Hours
- ✓ Additional Revenue for the Practice

The MedSure Network

Med adherence is best improved through a combination of technology and human factors (relational care). To achieve high levels of med adherence, the MedSure Network links patient, physician, pharmacy, caregivers and the Personal MedSure Coordinator (PMC – patient on a 1-to-1 basis for behavioral change).

MedSure App Interface

MedSure aMed Interface

When it is time for a dose:

- Patients are reminded to take their medication on the schedule and dose prescribed.
- The aMed automatically dispenses the correct medications or if the patient is using the app interface, they pull their dose from the strip pack box and confirm they have taken the medication.
- If a dose is missed, the patient is engaged with escalating alerts including contacting a caregiver.

Managing the logistics:

- The patient's dosing can include supplements in the strip pack, as well as notifications for any PRN or other non-tablet meds. Any changes in medication/dose are adjusted via the patient's schedule.
- The patient's medications are automatically refilled and mailed with a 30-day supply.
- MedSure provides tailored medication adherence reporting for the physician and staff.
